TPB TECH COOKWARE SET

TPB tech ELEVATION

All the TPB tech recipients include ELEVATION POINTS on its base of long-term durability. Suitable for ovens and dishwashers.

REASONS FOR THE ELEVATION:

- Thanks to this elevation, the cookware does not wear while cooking nor do they leave a mark on the worktop. Also when food drips underneath the cookware, the food will not attach to the base and as a result this cookware and surface will always remain clean.
- The residual temperature on the surface remains very low due to the elevation of the cookware since it is not in direct contact with the surface. There are also **no strident noises** when moving the cookware on the surface and the **electrical consumption is very low**.
- TPB tech® has a residual temperature range between 80° to 150°. TPB tech® induction system therefore **saves around 50%** of energy compared to any other induction system on the market and cools down 70° faster (as a result of its special composition) and 95% faster if we clean the surface with a sufficient quantity of water.
- In 2019 the introduction of new energy regulations will require all induction systems to produce a maximum of 190 watts per hour (currently a standard induction system in glass uses 250 watts per hour) **TPB tech® is already achieving 172 watts per hour** thanks to our elevation pan system and the technical worktop composition.

You should NEVER use the TPB tech cookware set for cooking in any other induction system, ceramic hob, gas, etc. than TPB tech as this could cause an accident in your kitchen.

TPB tech is not responsible for the consequences caused by improper use of the TPB tech cookware.
